HIGH-DENSITY GROW MOBILE SHELVING: A CLOSER LOOK

Some vertical mobile shelving systems on the market look the same from a distance. But if you know what to look for, you'll see what you're really sacrificing when you choose an alternative. The details matter when it comes to indoor cultivation. See why below:

	Spacesaver High-Density GROW Mobile Shelving	Competitors
QUALITY & DURABILITY		
Carriage	Powder-coated steel with diagonal bracing and carriage base cover	Aluminum or steel, no diagonal bracing
WHY IT MATTERS:	<i>Spacesaver's carriages are powder-coated steel with GROW White which is antimicrobial and has highly reflective properties. Diagonal bracing provides increased alignment, impact resistance, and durability to improve carriage tracking at extended lengths. Spacesaver's carriage base covers protect drive chains from harsh binding conditions and provide a uniform, finished appearance.</i>	
Carriage Length	60' Max	56' Max
WHY IT MATTERS:	<i>Spacesaver's carriages can extend up to 60' long (on unlevelled rail), offering ultimate flexibility and space optimization.</i>	
Carriage Capacity	3000 lbs. per section	1000 lbs. per foot
WHY IT MATTERS:	<i>Spacesaver's carriage capacity accommodates plants, pots, and system controls while aligning with the upright and beam capacities to ensure a structurally stable and safe system.</i>	
Drive Shaft	Powder-coated	Galvanized
WHY IT MATTERS:	<i>Spacesaver's powder-coated line shaft provides more corrosion resistance. Galvanized metal has the potential for off-gassing which can negatively affect air quality.</i>	
Rail	Many rail options. Standard is aluminum extruded base with rust-resistant steel insert and anti-tip.	Anti-tip aluminum with rust-resistant steel insert. Surface mount only (no recessed option)
WHY IT MATTERS:	<i>Spacesaver offers a wide variety of rail options to meet the needs of any grow facility. Combinations of recessed and surface-mount options, corrosion resistance, anti-tip, leveled and unlevelled capabilities provide unmatched versatility and offer the right solution for all circumstances.</i>	

	Spacesaver High-Density GROW Mobile Shelving	Competitors
Upright 	Welded RaptorRAC™, Widespan GROW and Knock-down options up to 30' high	Welded diagonals on lowest tier only up to 23' high
→ WHY IT MATTERS:	<i>Spacesaver offers three upright options for full customization: seismic welded, welded, and knock-down. The versatile Widespan GROW upright offers ultimate shelf spacing flexibility to integrate ventilation, light, and irrigation systems while also maintaining strength, durability, and safety.</i>	
Shelving Options 	Manufactured in-house Widespan and Pallet Racking	Outsourced Widespan and Pallet Racking
→ WHY IT MATTERS:	<i>Spacesaver manufactures our own shelving to offer full customization, adjustability, and color options while maintaining Spacesaver's reputation for quality and durability. Our Grow white paint is anti-microbial and offers high reflectivity. Competitors outsource Widespan production.</i>	
SAFETY		
Carriage Capacity	3000 lbs. per section	1000 lbs. per foot
Beam Capacity	1,650 lbs. at 8 feet and 3,300 lbs. at 4 feet	2,150 lbs.
→ WHY IT MATTERS:	<i>Any system is only as strong as its weakest component. Spacesaver's carriages, uprights, and beams have equivalent capacities, promoting durability and safety for the indoor grow environment.</i>	
Uprights	Welded RaptorRAC™, Widespan GROW and Knock-down options up to 30' high	Welded diagonals on lowest tier only up to 23' high
→ WHY IT MATTERS:	<i>Spacesaver's uprights have been fully tested to offer a variety of options to meet safety considerations in seismic areas and maximum load capacities. Competitors' uprights are significantly less stable.</i>	
Rail end stops	In rail or on top of rail	On top of rail
→ WHY IT MATTERS:	<i>Depending on facility requirements and customer preference, Spacesaver's end stops can be either recessed into the rail to prevent trip hazards, or installed on top of the rail. Competitors' end stops can only be placed on top of the rail.</i>	
SERVICE		
Competitive Price	Yes	Yes
→ WHY IT MATTERS:	<i>Spacesaver's new ActivRAC 3 and Widespan GROW is competitively priced to win in the cannabis market, while still maintaining the quality, durability, safety, and service that our customers expect.</i>	
Certified & Local Installers	Yes	No
→ WHY IT MATTERS:	<i>Spacesaver's distribution network provides local factory-trained and certified installers. Competitors do not have the local representation that can provide service quickly all across North America in the event of a malfunction.</i>	

	Spacesaver High-Density GROW Mobile Shelving	Competitors
Local Space Planning & Maintenance	Yes	No
→ WHY IT MATTERS:	<i>Spacesaver's local independent distribution network offers expert space planning, design and consulting, and rapid response to service calls.</i>	
Customization	Fully customizable	Limited
→ WHY IT MATTERS:	<i>Spacesaver's in-house custom manufacturing capabilities can meet any requirement. Competitors promote standard sizes and dimensions and outsource racking components.</i>	
Complete Solutions Provider	Yes	Limited
→ WHY IT MATTERS:	<i>Our partnership with Hawthorne Gardening Co. brings you expert advice and the best products in indoor horticulture. All Hawthorne products integrate with Spacesaver's GROW Mobile System to streamline workflows and improve plant health.</i>	

PARTNER WITH THE EXPERTS

As cannabis legalization expands, indoor cultivators are striving to produce consistent, high-quality products while also controlling costs and boosting yields. Optimizing space in new or existing cultivation facilities is a smart way to gain more canopy in less space. Whether you're planning a new building or retrofitting your existing facility, Spacesaver is your one-stop shop for expert space-planning assistance and the best products in indoor horticulture. Our consultants work with you and your team to improve efficiency and increase profits at every step along the way.
